Subject : Contract

25X1

Gentlemen:

This letter serves to set forth the Sponsor's understanding of the Contractor's intentions relative to continuing performance under the subject Contract.

It is understood that the Contractor *as the sponsor* is of the opinion that:

1. Resolution of the several technical problems set forth on the attached document, dated 18 July 1968, is technically feasible.
2. That the work set forth in the attached document is within the original contemplation of the parties, and does not constitute a change in scope for this Contract.
3. That the Contractor shall present to the Contracting Officer and his Technical Representative, on or before 15 August 1968, a Proposed Technical Program to achieve the complete design, fabrication, assembly, and testing of an operating   Processor which is acceptable to the Sponsor.
4. That the Sponsor shall return the Contractor's Proposed Program within fifteen (15) days from receipt with comments as appropriate.
5. That it is the intent of the parties to re-initiate Phase II work on 1 September 1968 and complete all work hereunder on or before 1 March 1969.
6. That completion of Phase II shall be achieved within six (6) months from re-initiation of work hereunder.

18 JUL 1968

\* 1. Dryer Unit - Requires redesign. Additional infra-red units to adequately dry heavy base film. Also, smaller unit directed at emulsion for slight drying effect (after). Also, high velocity air turbulence should be reduced in dryer.

2. Redesign of 90° turn-around roller-creases 9½" film.

3. Addition of proper tank controls - calibrated adjustment dials.

Also consider some cooling or refrigeration system in tanks.

4. Positive pressure - causing bubbling and leakage around covers and causes chemistry to be forced back into the replenishment bottles. Larger diameter exhaust hoses may relieve this.

\* 5. Replenishment System - requires a controlled system rather than demand system now existing. The existing overflow pipe can be used for leveling - or a controlled outlet on tank bottom as an alternative.

6. Film speed control - should be a true-reading speed selector calibrated in f/minute.

7. Drain pan - extend to include wash tank section and enlarge drainage outlet. Need to dump all tanks at one time.

8. Leakage and spillage on electric motors and pumps.

9. Noise level (Redesign of dryer).
